Function, section, symbols

General

The proportional pressure reducing valve type FTDRE 2 K is a direct operated screw-in cartridge valve in 3-way version. It reduces the control pressure (main port ①) proportionally to the solenoid current and functions largely independently from the inlet pressure (main port ②). With a command value of 0 or in case of power failure, the minimum pressure is set. Operation is effected by means of a proportional solenoid. The solenoid's interior is connected to the main port ③ and filled with hydraulic fluid. Depending on the electric command value, these valves can be used to reduce the system pressure continuously. The valve is suitable for controlling couplings, pumps and directional valves as well as for use in proportional pilot controls (particularly in the mobile area, however also for industrial applications).

Basic principle

The valve controls the pressure in the main port ① proportionally to the current at the solenoid. The proportional solenoid (1) converts the electric current into a mechanical force that acts on the control spool (2) via the armature. The control spool controls the connection between the main ports.

👉 Notices:

- ▶ Occurring tank pressure (main port ③) is added up to the control pressure (main port ①).
- ▶ If the valve is not installed or installed in a system that is not completely bled, the valve must not be energized as otherwise, the entering air has a very negative effect on the valve's dynamic behavior.

Type FTDRE 2 K3X/..C4..

- ① = Main port 1 (A)
- ② = Main port 2 (P)
- ③ = Main port 3 (T)

¹⁾ Not contained in "N0" version. Operation by pin tool (to operate the manual override, the connector must be disconnected ("C4" and "K40" version). Maximum number of plug-in processes 10 (specification AMP 108-18013).

Technical data

(For applications outside these parameters, please consult us!)

general			
Weight		kg	Approx. 0.16
Installation position	Any; preferably with electrical connection hanging down (for horizontal position of valve or electrical connection standing up, a minimum counter pressure must be generated to ensure the valve remains filled with oil).		
Ambient temperature range	► Version "18"	°C	-30 ... +120
	► Version "24"	°C	-30 ... +80
Salt spray test according to ISO 9227		h	600 (NSS test)
Surface protection Solenoid	Coating according to DIN 50962-Fe//ZnNi with thick film passivation		

hydraulic			
Maximum control pressure	► Main port ① (A)	bar	18, 24
Maximum inlet pressure	► Main port ② (P)	bar	100
Maximum counter pressure	► Main port ③ (T)	bar	Depressurized (maximum admissible 30) Counter pressure increases set pressure, even for current $I = 0$
Flow ($\Delta p = 7 \text{ bar}$) ¹⁾		l/min	≥ 2 (maximum admissible 7.5)
Maximum leakage flow	► Main port ③ (T)	cm ³ /min	≤ 60 ($p_p = 50 \text{ bar}$ and control current $I = 0$)
Maximum pilot flow		cm ³ /min	≤ 500 ($p_p = 50 \text{ bar}$, $q_{VA} = 0$ and control current $I = I_{\max}$)
Hydraulic fluid	See table page 5		
Hydraulic fluid temperature range		°C	-30 ... +80
Viscosity range		mm ² /s	10 ... 380
Maximum admissible degree of contamination of the hydraulic fluid, cleanliness class according to ISO 4406 (c)	Class 20/18/15 ¹⁾		
Load cycles	5 million ¹⁾		
Maximum step response in case of control current change (see characteristic curve below)	► t_{on}	ms	25
	► t_{off}	ms	20
Mesh size strainer element at the main port ②		μm	160

1) Rexroth standard test condition (HLP32; $\vartheta_{\text{oil}} = 40 \text{ °C} \pm 5 \text{ °C}$)

2) The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and at the same time increases the life cycle of the components.

For the selection of the filters see www.boschrexroth.com/filter.

We recommend using a filter with a minimum retention rate of $\beta_{10} \geq 75$.

Notice:

- The following documentation must be observed: 64020-B1 Hydraulic valves for mobile applications
- When exchanging screw-in cartridge valves, provide for the correct tightening torque!

Maximum step response

Technical data

(For applications outside these parameters, please consult us!)

Hydraulic fluid		Classification	Suitable sealing materials	Standards
Mineral oils		HL, HLP	FKM	DIN 51524
Bio-degradable	– insoluble in water	HEES	FKM	VDMA 24568
	– soluble in water	HEPG	FKM	

Important information on hydraulic fluids!

- ▶ For more information and data on the use of other hydraulic fluids, please refer to data sheet 90220 or contact us.
- ▶ There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.)!
- ▶ The flash point of the hydraulic fluid used must be 40 K higher than the maximum solenoid surface temperature.
- ▶ **Bio-degradable:** If bio-degradable hydraulic fluids are used that are also zinc-solvent, there may be an accumulation of zinc.

electric			
Voltage type		Direct voltage	
Supply voltages	V	12 DC	24 DC
Maximum solenoid current ³⁾	▶ Version "18"	mA	1800
	▶ Version "24"	mA	2200

	▶ Version "K40"	IP 67 and IP 69K with Rexroth mating connector (material no. R901022127)	
Control electronics (separate order)		Analog amplifier type RA... (data sheet 95230)	
		BODAS control unit type RC... (data sheet 95200)	
Recommended dither frequency (PMW) Chopper frequency (recommended) ⁵⁾	Hz	150	
Design according to VDE 0580			

- ³⁾ With version "24", observe working temperature, see page 7 and 8
- ⁴⁾ Due to the surface temperatures of the solenoid coils, the standards ISO 13732-1 and ISO 4413 need to be adhered to!
- ⁵⁾ The chopper frequency is to be optimized depending on the application.
In this regard, observe the working temperature range of the application.

When establishing the electrical connection, the protective earthing conductor (PE \perp) has to be connected correctly.

Characteristic curves with tolerance band
 (measured with HLP46, $\vartheta_{oil} = 40 \pm 5 \text{ }^\circ\text{C}$)

Measuring conditions
